

Spring Cleaning -Extreme Series-

Here is a great example of what NOT to do with your fountain. **This** was left out all winter, with no protection. Thankfully it survived, with a crack or two, and some paint **damage**. With a bit of work, it can be saved.

Using Dish soap and rag, wash bowl, pump, and connections. Check to see if the small cracks hold water (they can be fixed with epoxy putty). In this case, even though it was left out in a Michigan winter with no protection, it still held water!

While it did not come out perfect, it was good enough to be able to still provide another season of enjoyment!

Actually, the owner liked the weathered, beat up look! The surprise of the pump still working really gave Fountain Guy a laugh.

If you look close, you can see where the paint is damaged, but with water in it and running, it still looks pretty good. While this is not recommended treatment of a fountain, it does show that with some work, you can fix some problems easily!
