

REPAIRS WITH REPAIR PUTTY

Repairing your fountain, birdbath or statue is easy with a few simple steps.

What you'll need: Rubber gloves, Fountain & Statue Repair Putty AD49340, Utility Knife, Paint

Prep the area requiring repair by removing any debris. Ensure the surface area is clean.

For larger repairs, Styrofoam or a similar material can be used to fill any large voids.

Carefully trim away any excess material with a knife or scissors.

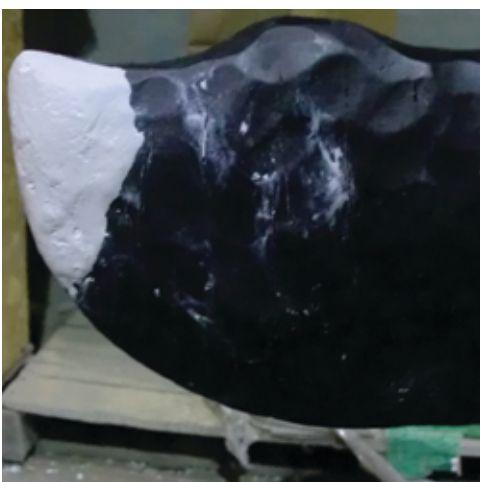

Cut a section of repair putty. It's best to work in small sections at a time.

While wearing gloves, thoroughly mix the putty until it is a solid and consistent colour.

Carefully apply the putty to the affected area. A cloth or other material can be used if needed to add texture to the putty as it dries.

Allow the repair putty to fully dry. Typically this takes about 1 hour.

Choose a spray paint that matches the finish of your piece. We recommend paints intended for plastic or concrete applications. Hobby paints are also great for these types of repairs.

Allow the paint to dry. Add any finishing touches as needed. Multi-colour textured paints often work the best for touch-ups, as they blend well.
