

# Repairing a small crack with uneven texture

Weather damage, rough handling, or neglect can cause any material to crack causing water leakage or visible imperfections.

Our brand of repair putty, as well as the Oatey and JB brands, can easily repair the crack and molded to the texture of any unit.

Be sure to wear gloves, and choose a well ventilated area to affect the repair.

**Identify the full extent of the cracked area. Clean any loose debris from affected area**

**Follow label directions to mix a small amount of putty until you reach a consistent color. More than one application may be required.**

**Firmly apply mixed putty into place**

**Apply putty to cover more than the affected area, pushing firmly around the edges to ensure a tight bond, and reduce the seams creating a less noticeable repair.**

**When putty partially cures, tools such as pliers or blade will help create a matching texture**

**Let putty fully cure for minimum one hour before painting.**

**A variety of spray paints can be used to match your color, or a combination of paints for a perfect match.**

**We recommend the Rustoleum brand "paints for plastic" as an excellent choice for adhesion and durability.**
