**First unpack carton carefully, arranging parts safely in your working area.**

Feed the cord through the cord pipe.

Pass the cord through the bowl.

Pass the cord down the pedestal, and align with groove at the base.

Twist and lock bowl to base.

Pump is preset to full just lower if less splash is desired.

Connect the tubing to the pump, be sure it sits flat inside the housing without any kink in the hose.

Twist and lock the top into place.

The final assembly should look like this

Now simply fill with clean water and plug into a grounded GFCI outlet  
**We recommend keeping bowl 3/4 full of water to avoid pump burnout.**
